Form flattening example

Example file. No customer information. Not a commercial invoice.

Editable note field

The field below has a stored value and a visible appearance.

Demonstration only

After flattening, the value should remain visible but not editable.

UTILGO / SYNTHETIC DEMONSTRATION

Table conversion example

Example file. No customer information. Not a commercial invoice.

Code	Item	Quantity	Unit price	Amount
00123	Notebook	3	12.50	37.50
00124	Folder	2	8.00	16.00
00125	Pen	5	2.30	11.50
	Total			**65.00**

Check these values after conversion

Three item rows; five table columns.

Product codes keep their leading zeros: 00123, 00124, 00125.

Amount total: 65.00. PDF tables do not contain spreadsheet formulas.

Reading order and page selection

Example file. No customer information. Not a commercial invoice.

A short passage for text extraction

This is a deliberately simple document with three labelled pages.

Selecting pages 1 and 3 should exclude this page from the result.

Deleting page 2 should leave the table page and the form page.

Reordering to 3,1,2 should put the form first.

Text extraction should contain this sentence in the downloaded TXT file.

This is an example, not a success guarantee.

Complex layouts, unusual fonts and scanned pages can behave differently.

Always inspect the result before using it in a real workflow.
